

Data used in “Liar’s Loan? Effects of Origination Channel and Information Falsification on Mortgage Delinquency,” authored by Jiang, Nelson, and Vytlačil, and published in the *Review of Economics and Statistics*, are proprietary data that must be kept required for confidentiality given by both the authors’ contract with the data provider and the Institutional Review Bureau Board of Columbia University. External researchers who would like to access the data must obtain IRB clearance regarding human subjects research at both their home institution and Columbia University. Upon approval, the researchers may access data on site using a non-networked computer at Columbia University, but may not transfer data off-site.
